ASSISTANT MUNICIPAL COUNSELOR

Special Permit Program Description

Revised January 17, 2025

This Special Permit is brought on behalf of the Applicant, Standard Iron & Metal Co., Inc., and Scrap Management Industries, to use the properties located at 1501 E. Reno Ave. and 1315 E. Reno Ave. (collectively referenced as “Property”) as a scrap operation, including scrap of recyclable materials and outdoor storage. Metal products will be shredded on site and delivered to a purchaser.

The Property is surrounded by the following zoning districts and uses:

- North: I-3 / Railroad
- South: I-3 / Industrial development
- East: I-3 / Undeveloped
- West: I-3 / Industrial development

The existing structure shall remain. A sight-proof fence shall be installed along the arterial frontage where outdoor material is stored. The following conditions shall also be included with this Application:

Hours of Operation:

- The facility shall be open to the public Monday thru Friday from 7:30 a.m. to 4:30 p.m., and Saturday from 7:30 a.m. to 12:00 p.m.
- The mill will continue to operate until 6:00 p.m. on weekdays and until 6:00 p.m. on Saturday, after public hours
- Maintenance of the equipment after public hours may continue after operation of the mill ceases

Scrap Management Industries (SMI) works to ensure that the safety of employees and site visitors is of paramount importance, and this includes the safety of the neighbors as well. Within metals recycling, explosions can happen as a result of certain materials coming onto the yard and being unintentionally processed, so recycling facilities and feeder yards implement certain processes to ensure these events are minimized and mitigated as much as possible. Said procedures are as follows:

- Cameras are in place on the scales to document each load, which allows scale house personnel to briefly inspect the loads to ensure loads do not have any hazardous materials.
- SMI personnel are used at the scale house to get better visual affirmations and document findings about loads coming in. As much as possible and as needed, scale house personnel will walk around the load and inspect the material to the best of their ability. If any sealed container is found, the customer is informed and is required to take that container with them upon leaving the yard.
- SMI personnel, including equipment operators unloading piles, specifically look for high pressure gas cylinders, batteries, unopened barrels/containers, air bottles, hydraulic cylinders, propane tanks, and aerosol cans. Suspected hazardous material

is spread out on the ground for further inspection. If the material is found to be hazardous, it is reported to the customer as well as the scale house, returned to the customer for removal, and rejected.

- When a car or a load of cars comes in, SMI personnel confirm that fluids have been drained, and the battery is removed. If the car is compressed natural gas, electric, or powered by fuel other than diesel or gasoline, appropriate review and determination is made as to whether the material can be handled properly. If these criteria are not met, the load is rejected.

All other City, County, State, and Federal regulations shall be met and adhered to.
