Subject: WT-0249-1 Emergency Draper Filter Improvements – Draper Water Treatment Plant  
Amendment No. 1

Dear Mr. Mokhtari:

Project WT-0249-1 Emergency Draper Filter Improvements includes work in Filter No. 18 of the Draper Water Treatment Plant. The project includes demolition of a 3-inch thick grout layer on the floor of the filter cells, installation of a new filter underdrain system and grout, and installation of new sand and anthracite media. The project also included bid items which could be used to repair any cracks found in the filter basin walls, floor slab, and/or joints.

While construction was ongoing in Filter 18, numerous cracks were discovered in the floor slab and floor/wall joints that could not be identified prior to bidding because of the 3-inch grout layer that was present. Once the grout layer was removed, significant micro-cracks and water seepage was observed in both cells of Filter 18.

Approval of this amendment item is urgent to meet the crack injection subconsultant's availability and keep the project on schedule. The contractor has maintained work by moving staff and resources to Filter 9 until the repairs in Filter 18 are complete and ready for underdrain installation.

The amount of polyurethane injection crack repair exceeds the original bid quantity. An additional 498.25 LF for Bid Item 01-21 Expanding Polyurethane Resin Crack Injection at \$315.00 per LF is necessary to complete the work.

The milestone dates for Filter 18 and Filter 9 will be updated to September 23, 2022 and September 2, 2022, respectively. An additional 5 calendar days are added to the Final Completion date. Revised Final Completion date will be January 21, 2023.

Sincerely,

CAROLLO ENGINEERS, INC.

Rebecca Poole, PE  
Project Manager
